M.Phil.,	RESEARCH METHODOLOGY	MBC101
SEMESTER-I		HRS/WK-9
CORE-1		CREDIT-5

Objectives :

- To provide knowledge and skills to understand the role of statistics in research.
- To develop skill in scientific writing and recent techniques.

Course Outcomes

CO1: To understand the principles of research, the methods of literature collection, identifying the research problems and the steps to publish research works.

CO2: To gain knowledge of bioinformatics tools used in research.

CO3: To understand the usage of biostatistics tools in research analysis.

CO4: To understand the principle and applications of latest techniques used in research.

CO5: To gain knowledge of IPR and its related issues and to follow the bioethics in research.

UNIT I - Scientific Research

[35 hours]

Research .definition, importance & need for research ethics, selection of topic, hypothesis. Research schedules, Sample collection techniques,. Data collection, review of literature & its use in designing a research work. Mode of collection of literature. Year books, books & monographs, journals, conference proceedings, abstracting & indexing journals, notes &

index cards, internet, magazines, CD- ROMS. Preparation of manuscript- plan of the report, designing of methodology, interpretation of data & thesis layout. Scientific writing .characteristic of scientific writing, essential features of an abstract, presentation of data, writing of results & discussions. Computer application in scientific research. World Wide Web. Finding scientific articles . Pub med .Public biological databases. Power point features, slide preparation.

UNIT II - Bioinformatics

[25 hours]

The scope of bioinformatics. The internet. The world wide web. File formats. Biological data bases- sequence and structure- NCBI, PDB. Data retrieval – the Entrez system. Searching sequence databases – sequence similarity searches, substitution matrices. Database search- FASTA and BLAST. Protein multiple sequence alignments- CLUSTAL. Protein docking.

UNIT III - Biostatistics

[25 hours]

Collection and classification of data – diagrammatic and graphic representation of data – measurement of central tendency – standard deviation – standard error- normal distribution – test of significance based on large samples – small samples – student t test – F test- correlation and regression – Chi square test for independents of attributes – ANOVA. Use of SPSS . Multiple Duncan's test.

UNIT - IV - Biotechniques

[25 hours]

Blotting techniques, CD-spectra, Capillary electrophoresis, working and applications. ELISA. Spectroscopy- general principle and applications- Mass spectroscopy, XRD- DNA sequencing- sangers and pyrosequencer, 2D electrophoresis, MALDI-TOF, COMMET assay, PCR, peptide mass finger printing.

UNIT V - Bioethics and Patenting

[25 hours]

Bioethics involved in animal studies, Patents- process and product, copyright, TRIPs, IPR, plant breeder's right, conditions for patenting; patenting of live forms.

M.Phil	Biochemical Aspects of Diseases	MBC102
SEMESTER -I		HRS/WK-9
CORE-1		CREDIT-5

Objectives:

To gain knowledge about the basis of various lifestyle diseases and their complications.

Course Outcomes

CO1: To gain knowledge of biochemical and clinical complications of Diabetes mellitus and cancer.

CO2: To understand the formation of free radicals and its toxicity.

CO3: To understand the state of marker enzymes in various biochemical diseases.

CO4: To understand the biochemical role and bioavailability of different antioxidants.

CO5: To gain knowledge on mechanism of carcinogenesis toxicity and different aspects of heavy metal toxicity.

UNIT I**[25 hours]**

Maintenance of blood sugar- Diabetes mellitus - classification - stages - complications and monitoring. Carcinogenesis- molecular basis of cancer- oncogenes- mechanism- Antioncogenes-p53 pathway and its role

UNIT II**[25 hours]**

Formation of free radicals, autoxidation initiated by oxygen radicals, Influence of free radicals in metal toxicity. Free radical hepatotoxins- CCl₄ model .free radicals and cancer .Oxidative process in tissue injury. Detection of free radicals and radical ions.Role of free radicals in diseases.

UNIT III**[25 hours]**

Marker enzymes in hepatobiliary disease, myocardial infarction, atherosclerosis, renal dysfunction. Cancer markers for oral, prostate, colorectal breast and GI tract cancer, oncofetal cancer markers.

UNIT IV**[25 hours]**

Enzymic antioxidants- Chemistry, mechanism, antioxidant effect of SOD, catalase, Glulathione Peroxidase. Non Enzymic antioxidants- source, chemistry, toxicity, biochemical functions, bioavailability, bioassays, Antioxidant effects of Vit A, Vit C, Vit E, glutathione and selenium.

UNIT V**[35 hours]**

Toxic mechanism- Carcinogenesis, teratogenesis & immunotoxicity,LD₅₀, ED₅₀,TI Heavy metal toxicity - effects of physiochemical and biological factors. Bioassays for heavy metal toxicity, pathological and histopathological examinations for heavy metal toxicity.
