Total Credits: 90

I – M.Sc (Maths)		PMT701
SEMESTER – I	ALGEBRA – I For the students admitted from the year 2009	HRS/WK - 6
CORE – 1	-	CREDIT - 5

To introduce the concepts and to develop working knowledge on class equation, solvability of groups, finite abelian groups, linear transformations, real quadratic forms.

COURSE OUTCOMES:

To help the students to learn the higher level on Algebra

CO1: Studying more on groups about Another Counting Principle

CO2: Studying about Sylow's proofs on index of subgroups

CO3: Learning about Direct products and Modules of groups

CO4: Reading the canonical forms and Jordan forms of Matrices

CO5: Studying on Rational canonical form of Trace and Transpose of Matrices

UNIT-I

Another counting principle.

UNIT-II

Sylow's Theorem

UNIT-III

Direct Products, Finite Abelian groups, Modules.

UNIT-IV

Canonical Forms: Triangular forms, Nilpotent Transformations, A Decomposition of V, Jordan form

UNIT-V

Rational Canonical Form, Trace and Transpose,

TEXT BOOK

1. I.N. Herstein. Topics in Algebra [II Edition] Wiley Eastern Limited; New Delhi; 1975.

Unit 1 - Chapter 2: Sections 2.11 [Omit Lemma 2.1,2.5]

Unit 2-Chapter 2:12

Unit 3- Chapters: 2.13, 2.14, 4.5

Unit 4 -Chapters: 2.13, 2.14, 4.5

Unit 5 - Chapter: 6.7, 6.8,

REFERENCE BOOKS

SEMESTER – I	REAL ANALYSIS For the students admitted from the year 2011
CORE – 2	For the students admitted from the year 2011

PMT702S HRS/WK - 6 CREDIT - 5

OBJECTIVES:

To work comfortably with functions of bounded variation, Riemann -Stieltjes Integration, convergence of infinite series, infinite product and uniform convergence and its interplay between various limiting operations.

COURSE OUTCOMES:

At the end of the Course the students should be able to exhibit

CO1: Learning the functions of bounded variations in real analysis

CO2: Getting the knowledge about basics and properties of Reimann-Steiljes Integral

CO3: Knowing more properties of Reimann- Steiljes Integral

CO4: Receiving more information about infinite series

CO5: Acquiring more knowledge of sequences of functions

UNIT-I: FUNCTIONS OF BOUNDED VARIATION:

Introduction - Properties of monotonic functions - Functions of bounded variation - Total variation - Additive property of total variation - Total variation on [a, x] as a function of x - Functions of bounded variation expressed as the difference of two increasing functions - Continuous functions of bounded variation.

UNIT-II: THE RIEMANN - STIELTJES INTEGRAL:

Introduction - Notation - The definition of the Riemann - Stieltjes integral -Linear Properties - Integration by parts- Change of variable in a Riemann -Stieftjes integral - Reduction to a Riemann Integral - Euler's summation formula - Monotonically increasing integrators, Upper and lower integrals -Additive and linearity properties of upper and lower integrals - Riemann's condition - Comparison theorems.

UNIT-III: THE RIEMANN-STIELTJES INTEGRAL:

Integrators of bounded variation-Sufficient conditions for the existence of Riemann-Stieltjes integrals-Necessary conditions for the existence of Riemann-Stieitjes integrals- Mean value theorems for Riemann - Stieltjes integrals - The integrals as a function of the interval - Second fundamental theorem of integral calculus-Change of variable in a Riemann integral-Second Mean Value Theorem for Riemann integral

UNIT-IV: INFINITE SERIES:

Infinite Series : Absolute and conditional convergence - Dirichlet's test and Abel's test - Rearrangement of series - Riemann's theorem on conditionally convergent series.

Double sequences - Double'series - Rearrangement theorem for double series - A sufficient condition for equality of iterated series - Multiplication of series - Cesaro summability.

UNIT-V: SEQUENCES OF FUNCTIONS:

Point-wise convergence of sequences of functions - Examples of sequences of real - valued functions - Definition of uniform convergence - Uniform convergence and continuity - The Cauchy condition for uniform convergence - Uniform convergence of infinite series of functions - Uniform convergence and Riemann - Stieltjes integration - Non-uniform Convergence and Term-by-term Integration - Uniform convergence and differentiation - Sufficient condition for uniform convergence of a series -Mean convergence.

TEXT BOOK

Tom M.ApostoI: Mathematical Analysis, 2nd Edition, Addison-Wesley Publishing Company Inc. New York, 1974.

Unit 1 - Chapter - 6: Sections 6.1 to 6.8

Unit 2 - Chapter - 7; Sections 7.1 to 7.14

Unit 3 -. Chapter - 7: 7.15 to 7.22

Unit 4 - Chapter - 8 Sections 8.8, 8.15, 8.17, 8.18, 8.20, 8.21 to 8.26

Unit 5- Chapter - 9 Sec 9.1 to 96, 9.8,99, 910,911, 9.13

I – M.Sc (Maths)		PMT703
SEMESTER – I	ORDINARY DIFFERENTIAL EQUATIONS	HRS/WK – 6
CORE – 3	For the students admitted from the year 2009	CREDIT -4

To develop strong background on finding solutions to linear differential equations with constant and variable coefficients and to study existence and uniqueness of the solutions of first order differential equations.

COURSE OUTCOME:

CO1: knowing the basic concepts Linearly Independent and dependent functions for solving differential equations.

CO2: Knowing methods to solve the differential equations and check the linear solutions.

CO3: Knowing some new techniques to convert differential equations for matrix form to find matrix solution.

CO4: Knowing some matrix methods to solve the linear differential equations.

CO5: KnowingtheapplicationofRealAnalysisforsolvingthedifferentialequations with Analysis of unique solutions.

I – M.Sc (Maths)		PMT704S
SEMESTER - I	CLASSICAL MECHANICS	HRS/WK – 6
CORE – 4	For the students admitted from the year	CREDIT -4
	2011	

To study mechanical systems under generalized coordinate systems, virtual work, energy and momentum, to study mechanics developed by Newton, Langrange, Hamilton Jacobi and Theory of Relativity due to Einstein.

COURSE OUTCOMES

- CO1:Use knowledge of mechanical system in classical mechanics.
- CO2:Understand formulate physical problems as classical mechanics using Lagrange's equation.
- CO3:Interpret solutions in physical context, Hamiltonian equations, variational principle.
- CO4:Classify classical mechanics, apply Hamiltonian Jacobians, descriptions.
- CO5:Formulate, understand analogies between canonical transformation.

UNIT-I: MECHANICAL SYSTEMS

The Mechanical system - Generalised coordinates - Constraints - Virtual work - Energy and Momentum

UNIT-II: LAGRANGE'S EQUATIONS

Derivation of Lagrange's equations- Examples - Integrals of motion.

UN1T-III; HAMILTON'S EQUATIONS

Hamilton's Principle - Hamilton's Equation - Other variational principle.

UNIT-IV: HAMILTON-JACOBI THEORY

Hamilton Principle function - Hamilton-Jacobi Equation - Separability

UNIT-V: CANONICAL TRANSFORMATION

Differential forms and generating functions - Special Transformations - Lagrange and Poisson brackets.

TEXT BOOK

1.D. Greenwood, Classical Dynamics, Prentice Hall of India, New Delhi, 1985.

Unit 1 - Chapter 1: Sections 1.1 to 1.5

I – M.Sc (Maths)		EPMT705T
SEMESTER – I	MATHEMATICAL PROGRAMMING	HRS/WK – 6
ELECTIVE – 1	For the students admitted from the year 2014	CREDIT – 4

This course introduces advanced topics in Linear and non-linear Programming.

COURSE OUTCOMES:

CO1: Identify the significance to use ILP.

CO2: Know the different between LPP and DPP approaches.

CO3: Able to use some of the NLP technique.

CO4: Learn to solve general LPP in an effecntial computation procedure.

CO5: Solving LPP using Revised simplex method

UNIT-I: INTEGER LINEAR PROGRAMMING:

Types of Integer Linear Programming Problems - Concept of Cutting Plane -Gomory's AN Integer Cutting Plane Method - Gomory's mixed Integer Cutting Plane method - Branch and Bound Method.- Zero-One Integer Programming.

UNIT-II: CLASSICAL OPTIMIZATION METHODS:

Dynamic Programming: Characteristics of Dynamic Programming Problem -Developing Optimal Decision Policy - Dynamic Programming Under Certainty - DP approach to solve LPP.

UNIT-III: NON-LINEAR PROGRAMMING METHODS:

Examples of NLPP - General NLPP - Graphical solution - Quadratic Programming - Wolfe's modified Simplex Methods - Beale's Method.

UNIT-IV: THEORY OF SIMPLEX METHOD

Canonical and Standard form of LP - Slack and Surplus Variables -Reduction of any Feasible solution to a Basic Feasible solution - Alternative Optimal solution - Unbounded solution - Optimality conditions - Some complications and their resolutions - Degeneracy and its resolution.

UNIT-V: REVISED SIMPLEX METHOD

Standard forms for Revised simplex Method - Computational procedure for Standard form I - comparison of simplex method and Revised simplex Method.

SEMESTER – I	APPLIED ABSTRACT ALGEBRA	HRS/WK – 6
ELECTIVE-I	For the students admitted from the year 2017	CREDIT -4
(OPTIONAL)		

The course aims to introduce the concepts of Lattices, Applications of lattices, Finite fields, Polynomials and Coding theory.

COURSE OUTCOMES:

This paper will help the students to learn the Applications of Algebra

CO1: Applications of Algebra in regarding with Lattices and its properties

CO2;Studying about Applications of Lattices like switching circuits

CO3: Getting the Knowledge about fields and polynomials

CO4:Studying more about polynomials like reducible and irreducible polynomials to find roots

CO5: Getting the Knowledge about coding theory for Linear Codes and Cyclic codes

.

UNIT-I LATTICES:

Properties of lattices: Lattice definitions- distributive lattice. Boolean Algebras: Basic properties-Boolean polynomials, ideals, minimal forms of Boolean polynomials.

UNIT-II APPLICATIONS OF LATTICES

Switching circuits, Basic definitions, applications

UNIT-III FINITE FIELDS

Finite Fields and Polynomials - Finite Fields

UNIT-IV POLYNOMIALS:

Irreducible polynomial over finite fields.

UNIT-V CODING THEORY

Linear codes-Cyclic codes

TEXT BOOK:

Applied Abstract Algebra-by Rudolf Lidl and Guntur Pilz, Springer- Verlag New York 1998.

UNIT-I

Extension fields (Finite extension, algebraic extension and algebraic number).

UNIT-II

Roots of Polynomials (Reminder theorem, Factor theorem and isomorphism between F[x] and F'[t]).

UNIT-III

More about roots-Elements of Galois theory,

UNIT-IV

Solvability by radicals - Wedderburn's theorem on finite division rings.

UNIT-V

Integral Quaternions and the Four - Square theorem-Division Algebra

TEXT BOOK

I.N. Herstein. Topics in Aigebra [II Edition] Wiley Eastern Limited, New Delhi, 1975.

Unit 1 - Chapter 5: Section 5.1 Unit 2 - Chapter 5: Sections 5.3

Unit 3 -Chapter 5: Section 5.5 and 5.6.[Omit theorem 5.6.3]

Unit 4- Chapter 5 -Section 5.7 [omit Lemma 5.7.1, Lemma 5.7.2 and Theorem 5.7.1] Chapter 7: Sections 7.2 [Only Theorem 7.2.1]

Unit 5 - Chapter 7: Section 7.3 (omit theorem 7.3.1)[Lemma 7.4.1, 7.4.2&7.4.5 only].

I – M.Sc (Maths)		PMT807
SEMESTER - II	MEASURE THEORY	HRS/WK – 6
CORE – 6	For the students admitted from the year	CREDIT – 5
	2008	

OBJECTIVE.

To generalize the concept of integration using measures and to develop the concept of analysis in abstract situations.

COURSE OUTCOMES:

At the end of the Course the students should be able to exhibit

CO1: Learning the basics of Lebesgue Measure

CO2: Getting the more knowledge about Lebesgue Measure

CO3: Knowing more properties of Measureable set

CO4: Receiving the information about General measure

CO5: Acquiring more knowledge of Measure and outer measure

UNIT 1-LEBESGUE MEASURE

Outermeasure – Definition & properties – Lebesgue measure – measurable sets – properties – non – measurable – set-measurable functions-Little wood's three principle.

UNIT II-LEBESGUE INTEGRAL

Lebesgue Integral of simple function bounded measurable function —of a non-negative function—Fatou's lemma-monotone convergence theorem-General Lebesgue integral —Lebesgue convergence in measure.

UNIT III-DIFFERENTIATION AND INTEGRATION

Differentiation of monotone functions Vitali's lemma-Integral of derivative-Functions of bounded variation Differentiation of an integral –absolute continuity –convex functions-Jensen's inequality.

UNIT IV-GENERAL MEASURE AND INTEGRATION

Measure spaces –Measurable functions –Integration-Signed measure –Hahn decomposition theorem.

UNIT V-MEASURE AND OUTER MEASURE

Outer measure Measurability –extension theorem-product measures Fubini's theorem-Tonnelli's theorem.

TEXT BOOK

1. Real Analysis –H.L.Royden –Prentice Hall of India 2001 edition.

Unit 1- chapter 3 sec.1 to 6

I – M.Sc (Maths)		PMT808S
SEMESTER – II	NUMERICAL ANALYSIS	HRS/WK – 6
CORE – 7	For the students admitted from the year 2018	CREDIT – 4

This courses introduces a numerical methods for hands-on experience on computers.

COURSE OUTCOME:

- CO1:Knowing the methods to find roots of non-linear equation.
- CO2:Knowing the Numerical value of Integration by comparing the Analytical solution.
- CO3:Knowing the intermediate values using cubic spline.
- CO4: Knowing the methods of cubic spline to solve the differential equations.
- CO5: Knowing the numerical solution of partial differential equations.

UNIT –I: NONLINEAR EQUATION:

Fixed –point iteration method and its convergence- Bisection method- regular – Falsi method – secant method – convergence of secant/Regular-Falsi method – Newton- Raphson method and its convergence- convergence when roots are repeated.

UNIT-IINUMERICAL INTGRATIOM:

Newton – Cotes Formulae, Eulers- Maclaurin forrmula –Romberg integration- Gaussian quadratue

UNIT-III: SPLINES AND THEIR APPLICATIONS:

A piece – wise polynomial – spline approximation – uniqueness of cubic spline – construction of cubic spline.

UNIT-IV:

Minimal property of splines –Application to differential equation – Cubic spline parametric form – Chebyshev approximation by principles of least squares .

UNIT-V:PARTIAL DIFFERENTIAL EQUATION:

Some standard forms – Boundary conditions – Finite difference approximations for derivatives – Methods for solving parabolic equation – Explicit method – fully implicit scheme – Crank – Nicolson's (C-N) scheme – derivative boundary.

This course aims to discuss kinematics of fluids in motion, Equations of motion of a fluid, three dimensional flows, two dimensional flows and viscous flows.

COURSE OUTCOME:

CO1: To Understand the Concepts of flow in Fluid

CO2: Measure Fluid Pressure and related to flow velocity, understanding various equation

Bernouli's

CO3: To understand the concept of some Three Dimensional Flow, Like source, sink.

CO4: To understand and analysis the Concepts of Two Dimensional in Complex Fluid

CO5:To understand concepts of Stress in flow of Fluid, Navier Stokes Equation.

UNIT -I KINEMATICS OF FLUIDS IN MOTION:

Real fluids and Ideal fluids- Velocity of a fluid at a point, Stream lines, path lines, steady and unsteady flows- The Velocity potential – The vorticity vector – Local and particle rates of changes – Equations of continuity- Worked examples- Acceleration of a fluid – Conditions at a rigid boundary.

UNIT – II: EQUATIONS OF MOTION OF A FLUID:

Pressure at a point in a fluid at rest – Pressure at a point in a moving fluid – Conditions at a boundary of two inviscid immiscible fluids – Euler's equation of motion – Bernoulli's equationworked examples- Discussion of the case of steady motion under conservative body forces.

UNIT -III SOME THREE DIMENSIONAL FLOWS:

Introduction – Sources, Sinks, and doublets – Image in a rigid infinite plane – Axis symmetric flows.

UNIT – IV: SOME TWO DIMENSIONAL FLOWS:

Meaning of two dimensional flow – Use of Cyclindrical polar coordinate – The stream function – The complex potential for two dimensional, irrotational incompressible flow- Complex velocity potentials for standard two dimensional flows- Some worked examples- Two dimensional Image systems- The Milne Thompson circle Theorem.

UNIT – V: VISCOUS FLOWS:

Stress components in a real fluid – Relations between Cartesian components of stress – Translational motion of fluid elements- The rate of strain quadric and principal stresses- some further properties of the rate of strain quadric – Stress analysis in fluid motion- Relation between stress and rate of strain – The coefficient of viscosity and Laminar flow – The Navier – Stokes equations of motion of a Viscous fluid.

ELECTIVE-II	For the students admitted from the year 2014	CREDIT -4

The course aims to introduce PERT, CPM, deterministic and probabilistic inventory systems, queues, replacement, maintenance problems and simulation problems.

COURSE OUTCOMES:

CO1: Acquires the knowledge of PERT – CPM calculation

CO2: develops the skill of analyzing the stock managements

CO3: exposed to identify and solve different queuing models

CO4: to optimize the outcome in production using Replacement models

CO5: gets knowledge on stocks, demand and supply for smooth business progress.

UNIT-I: PROJECT MANAGEMENT: PERT AND CPM

Basic Difference between PERT and CPM – Steps in PERT/CPM Techniques- PERT/CPM Network Components and Precedence Relationships – Critical Path Analysis – Probability in PERT Analysis – Project time-cost Trade Off – Updating the Project – Resource Allocation.

UNIT - II : DETERMINISTIC INVENTORY CONTROL MODELS

Meaning of inventory Control – Functional Classification – Advantage of Carrying Inventory – Features of Inventory System – Inventory Model building – Deterministic Inventory Model with no Shortage – Deterministic Inventory with Shortages.

UNIT-III: QUEUES THEORY

Essential Features of Queueing System – Operating Characteristic of Queueing System – Probabilistic Distribution in Queueing Systems – Classification of Queueing Models – Solution of Queuing Models – Probability Distribution of Arrivals and Departures

UNIT-IV: REPLACEMENT AND MAINTANANCE MODELS

Failure Mechanism of Items – Replacement of Items Deteriorates with Time – Replacement of Items that fail completely – other Replacement Problems.

UNIT- V: SIMULATION

Introduction – Steps of Simulation Process – Advantages and Disadvantages of Simulation – Monte Carlo Simulation – Random Number Generation – Simulation Inventory Problems – Queuing Problems – PERT Problems.

TEXT BOOK: JK. Sharma, Operations Research, MacMillan India, New Delhi, 2001.

Unit 1- Chapter 13: Sec. 13.1 to 13.9, Unit 2 - Chapter 14: Sec. 14.1 to 14.8

Unit 3 -. Chapter 16: Sec. 16.1 to 16.7 Unit 4 - Chapter 17: Sec. 17.1 to 17.5

Unit 5 - Chapter 19: 19.1to 19.11, 19.13

I – MSC		EPMT810A
SEMESTER – II	SPECIAL FUNCTIONS	HRS/WK – 6
ELECTIVE -II	For the students admitted from the year	CREDIT – 4
(OPTIONAL)	2017	

To develop computational skill in certain special functions which are frequently occurring in higher mathematics and mathematical physics.

COURSE OUTCOME:

CO1: Students able to solve simultaneous linear differential equations.

CO2: Students able to determine the Numerical solution using Taylor series.

CO3: Students able to analyse problems in linear second order differential equations.

CO4: Students able to pertain Bessel functions and Legendre functions.

CO5: Students able to know Fourier series and Fourier integrals.

SEMESTER – I	MATHEMATICAL FOUNDATIONS FOR COMPUTER	HRS/WK - 6
CORE – 1	SCIENCE	CREDIT - 5
	For the students admitted from the year 2011	

The course aim is to introduce the concepts of operations on set and applications, logical operators, finite automata, equivalence of finite automata and pushdown automata.

COURSE OUTCOMES:

CO1: Know the basic concepts of operations on sets, relations and functions.

CO2: Learns to solve the logical operators and know the tautology concepts.

CO3: Know the concepts of finite automata and language accepted by a finite automata.

CO4: Know the concepts of equivalence of finite automata and nondeterministic finite automata.

CO5: Enables to understand the pushdown automata, acceptance by pushdown automata and important properties of move relation.

II – M.Sc (Maths)		PMT911
SEMESTER – III	COMPLEX ANALYSIS-I	HRS/WK – 6
CORE – X	For the students admitted from the year 2008	CREDIT – 5

The course aims to introduce the concepts of Analytic Functions Linear Transformations , Conformal Mappings , Complex Integration, Cauchy's Integral Formula, Calculus of Residues and Evaluation of Definite Integrals. Harmonic Functions.

COURSE OUTCOME:

At the end of the course students will be able to

CO1: Explain fundamental concepts of complex analysis and the role in modern mathematics.

CO2: Apply calculus in complex domain..

CO3: Apply cauchy's theorem in evaluating integral in different domains.

CO4: Apply cauchy's integral formula In evaluating complex integrals.

CO5: Apply cauchy's residue theorem in evaluating harder integral

UNIT-ICONFORMALITY:

Arcs and closed curves, Analytic Functions in Regions, Conformal Mapping, Length and Area.Linear Transformations:The Linear Group,The Cross Ratio, Symmetry, Oriented Circles, Families of Circles.

UNIT-IIELEMENTARY CONFORMAL MAPPINGS:

The Use of Level Curves, A Survey of Elementary Mappings, Elementary Riemann Surfaces. Complex Integration: Fundemental Theorems:Line Integrals, Rectifiable Arcs, Line Integrals as Functions of Arcs, Cauchy's Theorem for a Rectangle, Cauchy's theorem in a Disk.

UNIT-IIICAUCHY'S INTEGRAL FORMULA:

The Index of a Point with Respect to a Closed Curve, The Integral Formula, Higher Derivatives, Local Properties of Analytical Functions: Removable Singularities, Taylor's Theorem, Zeros And Poles, The Local Mapping, The Maximum Principle.

UNIT-IVTHE GENERAL FORM OF CAUCHY'S THEOREM AND THE CALCULUS OF RESIDUES:

Chains and Cycles, Simple Connectivity, Homology, The General Statement of Cauchy's Theorem, Proof of Cauchy's Theorem, Locally Exact Differentials, Multiply Connected Regions. The Residue Theorem, The Argument Principle.

UNIT-V DEFINITE INTEGRAL AND HORMONIC FUNCTION

Evaluation of Definite Integrals. Harmonic Functions: Definition and Basic Properties, The Meanvalue Property, Poisson's Formula, Schwarz's Theorem, The Reflection Principle.

TEXT BOOK:

Complex Analysis By Lars V.Ahlfors (Third Edition)

Chapter 3: 2.1 To 4.3 Chapter 4: 1.1 To 6.5

II – M.Sc (Maths)	TOPOLOGY	PMT912S
SEMESTER – III	For the students admitted from the year 2014-	HRS/WK – 6
CORE – XI	15	CREDIT – 5

The course aims to introduce the concepts of Metric spaces, Topological spaces, Separation axioms, Compact spaces and Connected spaces.

COURSE OUTCOME:

CO1:To understand Concept such as open set, closed set, interior, clourse related to Topology

CO2: create new topological by using sub spaces

CO3:To understand Concepts of Compactness and ability to analysis the related theorem

CO4:construct the completely regular spaces and normal spaces in topology.

CO5: Demonstrate a Weierstrass approximation theorem in locally connected spaces

UNIT-1 METRIC SPACES:

The definition and some examples-Open sets-Closed sets-Convergence, completeness, and Baire's theorem-Continuous mappings-Spaces of continuous functions-Euclidean and unitary spaces

UNIT-2 TOPOLOGICAL SPACES:

The definition and some examples-Elementary concepts-Open bases and open subbases-Weak topologies-The function algebras $\ell(X,R)$ and $\ell(X,C)$

UNIT-3 COMPACTNESS:

Compact spaces-Products of spaces-Tychonoff's theorem and locally compact spaces-Compactness for metric spaces-Ascoli's theorem

UNIT-4 SEPARATION:

T₁-spaces and Hausdorff spaces-Completely regular spaces and normal spaces-Urysohn's lemma and the Tietze extension theorem-The Urysohn imbedding theorem- The Stone-Cech compactification-

UNIT-5 CONNECTEDNESS:

Connected spaces-The components of a space-Totally disconnected spaces-Locally connected spaces-The Weierstrass approximation theorem

II – M.Sc (Maths)		PMT913S
SEMESTER – IV	DIFFERENTIAL GEOMETRY	HRS/WK – 6
CORE – VI	For the students admitted form the year	CREDIT – 5
	2015	

This course introduces space curves and their intrinsic properties of a surface and geodesics. Further the non-intrinsic properties of surface and the differential geometry of surfaces are explored.

COURSE OUTCOME:

CO1: To understand the concept of Space Curve and learn to classify the standard examples. In particular contact between curves and surfaces, Involutes, Evolutes, SerentFerent Formula.

CO2: To Learn Properly in Space Curves, Fundamental Existence in Space Curves

CO3: Understanding of Intrinsic Properties and its related to other discipline.

CO4: Calculate the Gaussian Curvature, Mean curvature, the geodesics of the surfaces

CO5: Capability to analysis Non Intrinsic Properties of surfaces

UNIT – I: SPACE CURVES:

Definition of space curve - Arc length - Tangent, normal and binormal - Curvature and torsion - Contact between curves and surfaces - Tangent surfaces - Involutes and evolutes.

UNIT- II: SPACE CURVES [Contd]

Intrinsic equations – Fundamental existence theorem for space curves – Helices.

INTRINSIC PROPERTIES OF A SURFACE: Definition of a surface – curves on a surface – Surface of revolution

UNIT - III: INTRINSIC PROPERTIES OF A SURFACE[Contd]:

Helicoids – Metric – Direction coefficients – Family of curves – Isometric correspondence – Intrinsic properties.

UNIT - IV: GEODESICS:

Geodesics – Canonical geodesic equations – Normal property of geodesics – Existence theorems- Geodesic parallels – Geodesics curvature – Gauss Bonnet theorem

UNIT – V: NON - INTRINSIC PROPERTIES OF A SURFACE:

The second fundamental form – Principal curvature – Lines of curvature – Developable – Developable associated with space curves

TEXT BOOK:

T.J. Wilmore, An Introduction of Differential Geometry, OxfordUniversity Press,(17th Impression) New Delhi 2002. (Indian Print)

Unit 1 Chapter I: Sections 1 to 7.,

Unit 2 Chapter I: Section 8 & Chapter II: Sections 1 to 3

Unit 3 Chapter II: Sections 4 to 9,

Unit 4 Chapter II: Sections 10 to 16,

Unit 5 Chapter III: Sections 1 to 5.

NUMBER THEORY AND CRYPTOGRAPHY

PMT914Q **HRS/WK - 5 CREDIT - 4**

For the students admitted form the year 2017

OBJECTIVES:

The course aim is to introduce the concept divisibility and Euclidean algorithm, quadratics residues and reciprocity, encryption and decryption, primality test.

COURSE OUTCOME:

CO1: Students able to understand the divisibility and Euclidean algorithm.

CO2: Students able to understand quadratics residues and reciprocity.

CO3: Students able to analyse encryption and decryption.

CO4: Students able to do the primality test.

CO5: Students able to the determine the elliptic curve primality test.

UNIT-1: INTRODUCTION TO NUMBER THEORY

The estimates for doing arithmetic-Divisibility and the Euclidean algorithm-Congruences-Model exponentiation-Some applications to factoring.

UNIT-II: QUARATICS RESIDUES AND RECIPROCITY

Finite Fields-Multiplication generators-Uniqueness of fields with prime power elements-Quadratic residues and reciprocity.

UNIT-III: CRYPTOSYSTEMS

Some simple crypto systems- Digraph transformation-Enciphering Matrices-Affine enchipering transformation RSA- Discrete log- Diffie-Hellman Key exchange-The massey-Omura cryptosystem-Digital signature standard- Computation of discrete log.

UNIT-IV: PRIMALITY AND FACTORING-I

Pseudoprimes- Strong pseudo primes- Solovay- Strassen primality test- Miller- Rabin test- Rho method-Fermat factoring and factor bases- Quadratic sieve method.

UNIT-V: PRIMALITY AND FACTORING-II

Elliptic curves-Elliptic curve primality test – Elliptic curve factoring –pollard's p-1 method – Elliptic curve reduction modulo n – Lenstras method.

II – M.Sc (Maths)		EPMT915
SEMESTER – III	FUZZY SUBSETS AND ITS APPLICATION	HRS/WK – 5
Elective – III	For the students admitted from the year 2008	CREDIT -3

This course aims to offer fuzzy graphs ,fuzzy relation ,fuzzy logic and fuzzy composition.

COURSE OUTCOMES:

CO1: Acquire knowledge on the basic definitions and fundamentals of Fuzzy set theory.

CO2: Able to get ideas on Fuzzy graphs and its properties

CO3: Improve their ability in the concept of Fuzzy relations

CO4: Attain knowledge of the Fuzzy Logic in different forms

CO5: Understand the applications of Fuzzy logic

UNIT -I: FUNDAMENTAL NOTION

Introduction –Review of the notion of membership-Concept of fuzzy subsets-Dominance relation-Simple operation- Set of fuzzy subsets for E and M finite-Properties of fuzzy subsets – Product and algebraic sum of two fuzzy subsets-problems.

UNIT -II: FUZZY GRAPHS

Introduction – Fuzzy graphs –Fuzzy relation -Composition of Fuzzy relation –Fuzzy subsets induced induced by the mapping –Conditioned fuzzy subsets-Properties of fuzzy binary relation-Transitive closure – Paths in finite Fuzzy graphs-Problems .

UNIT-III: FUZZY RELATION

Fuzzy Preorder relation –Similitude- Similitude sub relation –Anti symmetry –Fuzzy order relation – Anti-symmetry relations without loops-Ordinal relations- Ordinal functions- Dissimilitude –Resemblance –Properties of Similitude and Resemblance –Properties of Fuzzy perfect order relation –Problems.

UNIT-IV: FUZZY LOGIC

Introduction – Characteristic functions of a fuzzy subsets-Fuzzy variables – Polynomial forms – Analysis of function of Fuzzy variables – Method of marinos – Logical structure.

UNIT-V: APPLICATIONS.

Introduction – Engineering – Medical– Economics – Soft Computers

TEXT BOOKS:

- 1. A. Kaufman, Introduction to the theory of Fuzzy subsets, Vol I,(1975) Acadamic Press, New York,. (For unit I to unit IV)

UNIT I INTRODUCTORY CONCEPTS

Definitions - Classification of Linear Integral Equations - Solution of an Integral Equation - Converting Volterra Equation to ODE - Converting IVP to Volterra Equation - Converting BVP to Fredholm Equation

UNIT II FREDHOLM INTEGRAL EQUATIONS

Introduction - The Decomposition Method - The Direct Computation Method - The Successive Approximations Method - The Method of Successive Substitutions - Comparison between Alternative Methods - Homogeneous Fredholm Equations

UNIT III VOLTERRA INTEGRAL EQUATIONS

Introduction -The Adomian Decomposition Method - The Series Solution Method - Converting Volterra Equation to IVP - Successive Approximations Method - The Method of Successive Substitutions - Comparison between Alternative Methods - Volterra Equations of the First Kind

UNIT IV INTEGRA-DIFFERENTIAL EQUATIONS

Introduction - Fredholm Integro-Differential Equations - Volterra Integro-Differential Equations

UNIT V SINGULAR INTEGRAL EQUATIONS

Definitions - Abel's Problem - The Weakly-Singular Volterra Equations .

TEXT BOOK:

A First course in integral equations –A.M. Wazwaz (1997) (world Scientific)

COMPLEX ANALYSIS-II For the students admitted from the year 2008

PMT1016 HRS/WK - 6 CREDIT - 5

OBJECTIVES

The course aims to introduce the concepts of Power Series Expansions, Jensen's Formula, The Riemann Zeta Function, Arzela's Theorem, The Riemann Mapping Theorem, Conformal Mapping of Polygons, Simply Periodic Functions, Doubly Periodic Functions and The Weierstrass Theory

COURSE OUTCOME:

At the end of the course students will be able to

C01: Compute the Taylor's and Laurent expansion of simple functions, determine the singularity

C02: manipulate and explicit analytic expression for exponential and trigonometric functions.

C03: understand the Riemann zeta functions and its role in application of complex analysis to number theory.

C04: Apply Normality, Equi- continuity, compactness properties of family of analytic function.

C05: Apply Riemann mapping theorem in mapping of multiply connected region, Apply reflection principle in simple connected region.

UNIT-I:POWER SERIES EXPANSIONS:

Weierstrass's Theorem, The Taylor Series, The Laurent Series. Partial Fractions and Factorization: Partial Fractions, Infinite Products, Canonical Products, The Gamma Function

UNIT-II: ENTIRE FUNCTIONS:

Jensen's Formula, Hadamard's Theorem. The Riemann Zeta Function: The Product Development, Extension of (s) to the Whole Plane, The Functional Equation, The Zeros of the Zeta Function.

UNIT-III: NORMAL FAMILIES:

Equicontinuity, Normalitiy and Compactness, Arzela's Theorem, Families of Analytic Functions, The Classical Definition. The Riemann Mapping Theorem, Boundary Behavier, Use of the Reflection Principle.

UNIT-IV: CONFORMAL MAPPING OF POLYGONS:

The Behavior at an Angle, The Schwarz-Christoffel formula, Mapping on a Rectangle.A Closer Look at Harmonic Functions:Functions with the Mean-Value Property, Harnack's Principle.Simply Periodic Functions:Representation by Exponentials, The Fourier Development, Functions of Finite Order.

UNIT-V: DOUBLY PERIODIC FUNCTIONS:

The Period Module, Unimodular Transformations, The Canonical Basis, General Properties of Elliptic Functions. The Weierstrass Theory: The Weierstrass -function, The Functions (z) and (z), The Differential Equation.

UNIT I: BANACH SPACES:

Definition - examples-continuous linear transformations-The Hahn-Banach theorem-the natural embedding of N^* in to N^{**} - open mapping theorem-conjugate of an operator.

UNIT II: HILBERT SPACES:

Definition—examples-simple properties-orthogonal complements-orthonormal sets

UNIT III: HILBERTSPACES (CONTD):

conjugate space H* -ad joint of an operator-self adjoint operators-normal and unitary operators-Projections.

UNIT IV: FINITE DIMENSIONAL SPECTRAL THEORY:

Matrices-Determinants and the spectrum of an operator- The spectral theorem-A survey of the situation.

UNIT V: GENERAL PRELIMINARIES ON BANACH ALGEBRAS:

Definition – examples-regular and singular elements- Topological divisors of zero- The spectrum- The formula for spectral radius- The radical and semi-simplicity.

II – M.Sc (Maths)		PMT1019T
SEMESTER - IV	PARTIAL DIFFERENTIAL EQUATIONS	HRS/WK – 6
CORE – XX	For the students admitted from the year	CREDIT -4
	2017	

The course aim is to introduce the concept of equations of the first order and higher degree, elliptic differential equation, parabolic differential equation, hyperbolic differential equations.

COURSE OUTCOME

CO1: Use knowledge of partial differential equation(PDE), partial differential equation of first order.

CO2: Formulate fundamental concepts, second order PDE.

CO3: Understand analogies between elliptic differential equations.

CO4: Classify PDE and apply parabolic differential equation for a circle.

CO5: Solve practical PDE problems with hyperbolic differential equations.

UNIT - 1: PARTIAL DIFFERENTIAL EQUATIONS OF FIRST ORDER

Formation of Partial differential Equation - Solution of Partial Differential Equations of First order - Integral Surfaces passing through a given curve - The Cauchy Problem for First Order Equations - Compatible System of First Order Equation - Charpit's Method

UNIT-2: FUNDAMENTAL CONCEPTS

Introduction - Classification of Second Order PDE - Canonical Forms - Adjoint Operators - Riemann's Method

UNIT - 3: ELLIPTIC DIFFERENTIAL EQUATIONS

Occurrence of the Laplace and Poisson Equation – Boundary Value Problem (BVPs) – Separation of Variables – Dirichlet Problem for a rectangle – Interior Dirichlet Problem for a circle – Exterior Dirichlet Problem for a circle – Miscellaneous Examples

UNIT – 4: PARABOLIC DIFFERENTIAL EQUATIONS

Occurrence of Diffusion Equation – Boundary Condition – Elementary solution for the Diffusion Equation – Dirac Delta Function – Separation of Variable method - Miscellaneous Examples

UNIT - 5: HYPERBOLIC DIFFERENTIAL EQUATIONS

Occurrence of Wave Equations – Derivation of One dimensional Wave Equation – Solution of One dimensional Wave Equation by Canonical Reduction – The Initial value Problem; D' Alembert's Solution – Vibrating String – Variable Separable Solution – Forced Vibrations – Solution of Non-homogeneous Equation – Boundary and Initial Value Problem for Two-dimensional Wave-Periodic Solution of One-dimensional Wave Equation in Cylindrical Coordinates – Miscellaneous Examples

II – M.Sc (Maths)	FORMAL LANGUAGES AND AUTOMATA	EPM1020A
SEMESTER – IV	THEORY	HRS/WK – 6
ELECTIVE	For the students admitted from the year 2017	CREDIT -4

The course aims to introduce the concepts of **Finite Automata**, Regular expression, and regular sets, Context-Free Grammars, Pushdown Automata and Properties of Context-Free Languages

COURSE OUTCOMES:

CO1: Know the concepts of finite automata, nondeterministic finite automata and finite automata moves.

CO2: Learns the concepts of regular expression and pumping lemma for regular sets

CO3: Know the concepts of free grammars and simplification of context.

CO4: Enables to understand the pushdown automata and free languages.

CO5: Able to understand the properties of context-free languages.

UNIT-1 FINITE AUTOMATA:

Finite state systems- Basic definitions-Nondeterministic finite automata- Finite Automata with moves

UNIT-II REGULAR EXPRESSION AND REGULAR SETS:

Regular expressions- The Pumping lemma for regular sets. [18 HRS]

UNIT-III Context-Free Grammars:Context-Free grammars- Derivation trees (Definition and examples only).Simplification of context-free Grammars - Chomsky normal form- Greibach normal form

UNIT-IV PUSHDOWN AUTOMATA:

Definitions-Pushdown Automata and context-free languages.

UNIT-V PROPERTIES OF CONTEXT-FREE LANGUAGES:

The Pumping lemma for CFL's- Closure properties for CFL. Sections:2.1, 2.2, 2.3, 2.4, 2.5, 2.6, 2.7, 3.1, 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 5.2, 5.3, 6.1, 6.2 Omit 3.2, 3.3, 3.4, and 6.3

TEXT BOOK

Introduction to Automata Theory, Languages and Computation "by John E. Hop craft and Jeffrey D.Ullman. Narosa Publishing House, New Delhi, 1987.

II – M.Sc (Maths)		EPM1020
SEMESTER - IV	GRAPH THEORY	HRS/WK – 6
Elective – IV	For the student admitted from the year 2012	CREDIT -4

This course introduces the application of graph theory in various field..

COURSE OUTCOMES:

- CO1: Develops the skill of calculating minimum shortest path in a weighted graph.
- CO2: Learns to get an minimum weighted complete graph using krushal algorithm.
- CO3: Knows to determine the good solution for travelling sales man problem.
- CO4: Collectively solve the time tabling problem using edge colourings.
- CO5: Enables to understand the characterization of planar graph and dual, vertex colouring and its application.

UNIT-I: GRAPHS&SUBGRAPHS

Paths&Connection-cycles.

Application: The Shortest Path Problem-Sperner's lemma.

UNIT-II: TREES&CONNECTIVITY

Trees-cut edges and bonds-cut vertices-Cayles's formula.

Application: The connector Problem Connectivity: Connectivity-Blocks

Applications: Constructions of Reliable communication networks.

UNIT-III: EULER TOURS&HAMILTONIAN CYCLES

Euler Tours & Hamilton Cycles

Application: The Chinese postmanProblem –The travelling sales man problem.

UNIT-IV: DEGREE COLOURINGS&INDEPENDENT SETS

Edge chromatic number-vizings theorem, Independent sets-Ramsey's theorem.

Application: The time tabling Problem.

UNIT-V: VERTEX COLOURINGS

Chromatic number-Brooke's theorem-Hajose' Conjecture-Chromatic polynomials.

Applications: A Storage problem,

Plane & Planar graphs-Dual graphs-Kuratowski's theorem.
